Single IBC Bunded Spill Pallet

Our Bunded Spill Pallets are built tough for Australian conditions. For businesses handling and storing Intermediate Bulk Containers, adhering to Australian Safe Work practices is important to minimise health and safety risks and protect the environment from accidental leaks and spills. Manufactured from durable LLDPE they are resilient to corrosion and being UV protected, suitable for outdoor use with a recommended Cover and Frame. LLDPE is also resilient to oils, hydrocarbons and many strong chemicals. Be sure to be clear with chemical segregation guidelines for correct storage of hazardous liquids.

Dual Heavy Duty removable grates provide quick access to the 1300L sump for easy retrieval of contained liquids. The sump also provides an outlet plug. The high visibility yellow construction of the bund is built tough and is capable of a static load of 3600kg and also provides 2 way entry for Forklifts. Weighing in at 71kg, the IBC Bunded Spill Pallets provide a quality yet economical secondary containment solution, complimenting environmental and OH&S site requirements. Contact SEPMAR for further information about this product and others in our range.

Designed for:

- Storing single IBC
- Containing spilt liquids from reaching floors, drains and inventory
- Preventing slips from spilt liquids
- Easy loading and unloading
- Economical and practical secondary containment solution

Specifications:
